p. 26-29.

The Kharkov turbine works has created a last stage
blade of record size using stress-relieved normal
chrome steel (Kh13). Production of the last stage blade
caused no great technological difficulties and was ac-
commodated on normal longitudinal cutting machines
fitted with special devices. Experience gained showed
that there is a real possibility of creating still larger
last stage blading which will be reliable in operation.

Study concerned the scattering of monochromatic
radiation in a plane layer illuminated by parallel rays
under stationary conditions. The indicatrix of scat-
tering is held as arbitrary.
